ROADMAP.....	13

General Presentation

The interest of a cryptocurrency is to be able to exchange money from peer to peer without having recourse to a trusted third party like a bank. However, the issue of a crypto is a tricky one because most of the time, only the creators, minors or large investors can grab the majority of the chips. Indeed, the distribution policy is generally biased:

- creators keep 10 to 20% of the chips
- Some miners have supercomputers
- the whales buy quickly a large part

Bitcoin Unicorn goes further and offers a new way to distribute its token. The launch of the token will be done using a Proof-of-Content (POC) system.

We are Unicorn

Our crypto will be distributed equitably.

Proof of Content will not make any difference between the rich and the poor. We think that a White Paper can be boring, so we are proud to present the project with a real functioning application

Collaborative Platform

The Unicorn project is based on a collaborative platform for sharing and creating contents about cryptocurrencies and other token. The goal is to become reference in terms of the community in the ecosystem of cryptos, just as wikipedia can be for generalist contents.

Unicorn's benefit lies in the fact that everyone can:

- Sharing news
- Asking questions or give advice on Cryptos
- Contributing to elarge the democratization of 2.0 currencies

Launched in Beta on December 15, 2017, the project has currently gathered more than 4,000 participants from around the globe. Members of the Bitcoin Unicorn community will all receive an equal portion of a token after registration.

From there, the opportunity to earn more tokens by participating in the community will allow Bitcoin Unicorn to grow and improve. It's not possible to invest large sums into a community with no guaranted return.

Bitcoin Unicorn is forged by its members.

The strength of Bitcoin Unicorn's community is through its involvement, interactions, and also the quality of information and advice offered to members of the community.

The Token

Bitcoin Unicorn is a new generation cryptocurrency inspired by Bitcoin, Ethereum and Litecoin while improving them:

BTCUI pays homage to Bitcoin, the queen -mother of Crypto
Only Bitcoin is now considered a "safe haven" and no longer a bargaining chip.

BTCUI borrows the Litecoin supply
More chips = less speculation = more real use

BTCUI works with Blockchain Ethereum
This allows it cheaper and faster transfers.
It is compatible with all ERC-20 portfolios but
the forum is also your wallet!

In addition, the transaction fees between members are free and finally, BTCUI kept hot will bring you 2% interest per month.

In economics, an unicorn is a project that can reach \$ 1 billion in market capitalization.

Now, you know what Bitcoin Unicorn ambition is.

Missed the Bitcoin rocket in 2009?
Climb the unicorn with us now!

Total stock: 84,000,000

In circulation: 16,800,409

Capitalization: 886,200 \$

Next reduction of mining ("Halving"): at block 24,000,000

Technical details:

Contract: 0x5f2ec9cf1ec1c0e2c880b6584921e812a4225395

Symbol: BTCUI

Decimal: 8

Proof Of Content

A large part of crypto-currencies use proof of work (Proof of Work = POW). This mechanism is now reserved only for a portion of the population with powerful computers or by companies specialized in mining.

Bitcoin Unicorn is related to the human.
To its ability to create smart content.
To the sharing of knowledge.

Here what **Proof of Content** (Soft-Mining) is.

The validation of this content is submitted to the community in order to offer quality content.

The member wishing to share information may do so by text, an animation or a video of which he holds the rights.

Depending on the value of the content, the author will receive a BTCUI award based on the number of unique votes collected by the **community**.

**Bitcoin Unicorn is not distributed
by multiple Airdrop or ICO.**

The majority of Token is waiting for attribution to who wants to donate his time and knowledge by participating in the project.

Distribution Of Token

As we have seen, the tokens are distributed online but to go in get to more detail;

Unicorn has proposed a **unique airdrop** to the launch of 10 million tokens distributed the February 14, 2018.

Soft-mining

Content creation brings a minimum of 10 BTCUI and a bonus depending on the quality.

Upvote

When an author receives one upvote or more, he gets a reward of 4 BTCUI.

The upvote is an exchange of assets between members, there is no monetary creation.

Faucet

Community members can participate in an online lottery that distributes BTCUI.

Bank

But they can also place them in our bank with an interest rate of 2% per month.

Exchanges

The ability to trade Tokens on ForkDelta, EtherFlyer, EtherDelta and TokenStore is already available and other exchanges will be soon announced.

Halving

The value of an asset is relative to its rarity and its demand. With a fixed single supply of 84,000,000 BTCUI, we rely on scarcity as a means of social engagement.

The rewards are halved as soon as 8 million corners are given to the community, this is called Halving.

The Halving is a highlight of our community, it allows rewarding members who joined the project earlier.

With each halving the reward decreases but the financial value of the token increases thanks to the difficulty of extracting it. This favors to the adoption of the project for new populations eager to find BTCUI!

When all the tokens have been distributed by content creators there will only be upvotes between member to thank the best authors.

Free Use

One other benefits of BTCUI is to be exchange value without paying transaction fees.

When community members use the BTCUI Wallet, they can trade the chips without any transaction fees and in real time.

Simple, fast, effective and free.

It should also be remembered that since Bitcoin Unicorn is an **ERC-20 Token**, the free fees only apply to our member-to-member application.

When you decide to use your chips on the Blockchain Ethereum,

Gas costs are at your expense!

Use Of Token

The Token Unicorn can like all tokens be trade on [ERC20 compatible](#) trading platforms.

In the project, the Token serves to unlock levels.

Thus, the **application** and **Freemium members** can **only pay** in BTCUI for additional features.

Signature to advertise a Crypto project

Creation of Rubric

Purchase of advertising space

Transfer of value without member-to-member fees

BTCUI can also be used for **speculation** by placing them in the bank which gains **every month** or in the lottery with a draw every hour.

Open Team

The strength of the BTCUI project is being an international team **without a governing body!**

Any member **involved** in the project can apply to **join** the official Team.

Neither God nor Master

Therefore, it is obvious that the applicant will already have to prove himself on the project and show his knowledge before apply to the Team.

The **horizontal system** requires decisions to be taken together at virtual meetings and will need **consensus** to be adopted.

The project being **open source**, allows any member to realize a hard or soft fork of its own initiative.

The team is **not paid**, which let more chips for the general public.

However, having participated early in the project, they had time to **earn chips** before 1st Halving.
